Basic Facts about Low-Income Children

Children under 3 Years, 2014

Yang Jiang | Mercedes Ekono | Curtis Skinner February 2016

Children under 18 years represent 23 percent of the population, but they comprise 32 percent of all people in poverty. Many more children live in families with incomes just above the poverty threshold. Among all children, 44 percent live in low-income families and approximately one in every five (21 percent) live in poor families. Our very youngest children—infants and toddlers under age 3 years—appear to be particularly vulnerable, with 47 percent living in low-income families, including 24 percent living in poor families. Being a child in a low-income or poor family does not happen by chance. Parental education and employment, race/ethnicity, and other factors are associated with children’s experience of economic insecurity.

This fact sheet describes the demographic, socio-economic, and geographic characteristics of children and their parents. It highlights important factors that appear to distinguish low-income and poor children from their less disadvantaged counterparts.

How many infants and toddlers under age 3 years live in low-income families in the United States?

There are more than 11 million infants and toddlers under age 3 years in the United States, about 16 percent of the total child population.

◆ 47 percent—5.3 million—live in low-income families
◆ 24 percent—2.7 million—live in poor families

Figure 1: Infants and toddlers by family income, 2014

Note: Above low income is defined as at or above 200% of the federal poverty threshold (FPT), poor is defined as below 100% of FPT, and near poor is between 100% and 199% of the FPT. The low-income category includes both the poor and the near poor.
The percentage of infants and toddlers living in low-income families (both poor and near poor) has been on the rise—increasing from 44 percent in 2008 to 47 percent in 2014 (Figure 2). During this time period, the overall number of the very youngest children (children under age 3 years) decreased by 8 percent, while the numbers who were low income and poor increased by 4 percent and 1 percent, respectively (Table 1).

### Figure 2: Infants and toddlers living in low-income and poor families, 2008–2014

Has the percentage of infants and toddlers living in low-income and poor families changed over time?

The percentage of infants and toddlers living in low-income families (both poor and near poor) has been on the rise—increasing from 44 percent in 2008 to 47 percent in 2014 (Figure 2). During this time period, the overall number of

### Is a poverty-level income enough to support a family?

Research suggests that, on average, families need an income equal to about two times the federal poverty threshold to meet their most basic needs. Families with incomes below this level, such as families making below the following incomes, are referred to as low income:

- $48,016 for a family of four with two children
- $38,110 for a family of three with one child
- $32,634 for a family of two with one child

These dollar amounts approximate the average minimum income families need to make ends meet, but actual expenses vary greatly by locality. In 2014, the cost of meeting basic needs for a family of four required about $85,800 per year in Boston, Massachusetts; $61,500 in Akron, Ohio; $57,200 in Tulsa, Oklahoma; and $53,600 in McAllen, Texas.

### What is the 2014 federal poverty threshold (FPT)?

- $24,008 for a family of four with two children
- $19,055 for a family of three with one child
- $16,317 for a family of two with one child

### Figure 2: Infants and toddlers living in low-income and poor families, 2008–2014

Has the percentage of infants and toddlers living in low-income and poor families changed over time?

The percentage of infants and toddlers living in low-income families (both poor and near poor) has been on the rise—increasing from 44 percent in 2008 to 47 percent in 2014 (Figure 2). During this time period, the overall number of

### Is a poverty-level income enough to support a family?

Research suggests that, on average, families need an income equal to about two times the federal poverty threshold to meet their most basic needs. Families with incomes below this level, such as families making below the following incomes, are referred to as low income:

- $48,016 for a family of four with two children
- $38,110 for a family of three with one child
- $32,634 for a family of two with one child

These dollar amounts approximate the average minimum income families need to make ends meet, but actual expenses vary greatly by locality. In 2014, the cost of meeting basic needs for a family of four required about $85,800 per year in Boston, Massachusetts; $61,500 in Akron, Ohio; $57,200 in Tulsa, Oklahoma; and $53,600 in McAllen, Texas.
How do infants and toddlers compare to the rest of the population?

The percentage of infants and toddlers in low-income families surpasses that of adults. In addition, children under age 3 years are nearly three times as likely as adults 65 years and older to live in poor families (Figure 3).

Does the percentage of children in low-income families vary by children’s age?

The percentages of children under 18 years who live in low-income and poor families vary by age group. Children under age 3 years are more likely to live in low-income and poor families than older children (Figure 4).

- 47 percent of children under age 3 years—5.3 million—live in low-income families
- 24 percent of children under age 3 years—2.7 million—live in poor families
- 43 percent of children age 3 through 17 years—26.1 million—live in low-income families
- 21 percent of children age 3 through 17 years—12.7 million—live in poor families
Does the percentage of infants and toddlers in low-income families vary by race/ethnicity?

As Figure 5 illustrates, the percentages of low-income and poor infants and toddlers vary by race and ethnicity: whites comprise the largest share of all low-income children (36 percent) while Hispanics make up the largest share of poor children (37 percent). Black, American Indian, and Hispanic children are disproportionately low income and poor (Figure 6).

- 70 percent of black infants and toddlers—1.0 million—live in low-income families
- 66 percent of American Indian infants and toddlers—about 53,000—live in low-income families
- 64 percent of Hispanic infants and toddlers—1.8 million—live in low-income families
- 34 percent of white infants and toddlers—1.9 million—live in low-income families
- 30 percent of Asian infants and toddlers—about 0.2 million—live in low-income families
- 45 percent of infants and toddlers of some other race—0.3 million—live in low-income families

Does the percentage of infants and toddlers in low-income families vary by parents’ nativity?

- 55 percent of infants and toddlers with immigrant parents—1.5 million—live in low-income families
- 44 percent of infants and toddlers with native-born parents—3.8 million—live in low-income families
What are the family characteristics of low-income and poor infants and toddlers?

**Parents’ Education**

Higher levels of parental education decrease the likelihood that a child will live in a low-income or poor family. Among infants and toddlers with at least one parent who has some college or additional education, 33 percent live in low-income and 14 percent in poor families. By contrast, among children in this age group whose parents have less than a high school degree, 87 percent live in low-income and 60 percent in poor families (Figure 7).

- 87 percent of infants and toddlers with parents who have less than a high school degree—1.0 million—live in low-income families
- 73 percent of infants and toddlers with parents who have a high school degree but no college—1.6 million—live in low-income families
- 33 percent of infants and toddlers with at least one parent who has some college or additional education—2.6 million—live in low-income families

At the same time, significant shares of low-income and poor families with infants and toddlers are headed by parents with at least some college education, as shown in Figure 8.

**Parents’ Employment**

Infants and toddlers with a full-time, year-round employed parent are less likely to live in a low-income family, compared to infants and toddlers with parents who work part time or part year, or who are not employed (Figure 7).

- 33 percent of infants and toddlers with at least one parent who works full time, year round—2.5 million—live in low-income families
- 9 percent of infants and toddlers with at least one parent who works full time, year round—0.7 million—live in poor families
- 74 percent of infants and toddlers with no parent who works full time, but at least one parent who works part time or part year—1.7 million—live in low-income families
- 49 percent of infants and toddlers with no parent who works full time, but at least one parent who works part time or part year—1.1 million—live in poor families
87 percent of infants and toddlers with no employed parents—1.0 million—live in low-income families

70 percent of infants and toddlers with no employed parents—0.8 million—live in poor families

Nevertheless, many low-income and poor infants and toddlers have parents who work full time. About 48 percent of low-income children and 26 percent of poor children under age 3 years live with at least one parent employed full time, year round.

Family Structure

Forty-six percent of children under age 3 years in low-income families—2.4 million—and 34 percent of children under age 3 years in poor families—0.9 million—live with married parents. Children who live with married parents are much less likely to be poor or low income, compared to children who live with a single parent.

33 percent of infants and toddlers residing with married parents—2.4 million—live in low-income families

12 percent of infants and toddlers residing with married parents—0.9 million—live in poor families

74 percent of infants and toddlers residing with a single parent—2.8 million—live in low-income families

46 percent of infants and toddlers residing with a single parent—1.8 million—live in poor families

Does the percentage of infants and toddlers in low-income families vary by where they live?

Region

The percentage of infants and toddlers in low-income families varies substantially by region.

51 percent of infants and toddlers in the South—2.2 million—live in low-income families

47 percent of infants and toddlers in the West—1.3 million—live in low-income families

45 percent of infants and toddlers in the Midwest—1.1 million—live in low-income families

40 percent of infants and toddlers in the Northeast—0.7 million—live in low-income families

Residential Instability and Home Ownership

Research suggests that stable housing is important for healthy child development. However, infants and toddlers living in low-income families are more likely than other children to have moved in the past year and to live in families who rent, rather than own, their homes (Figure 10).

27 percent of infants and toddlers in low-income families—1.4 million—moved in the last year

18 percent of infants and toddlers in families above the low-income threshold—1.1 million—moved in the last year
72 percent of infants and toddlers in low-income families—3.8 million—live with families who rent their homes.

28 percent of infants and toddlers in families above the low-income threshold—1.7 million—live with families who rent their homes.

Are infants and toddlers in low-income families covered by health insurance?

Among all infants and toddlers, approximately 6 percent living in low-income families and 6 percent living in poor families are uninsured. Consistent with research suggesting older children are particularly at risk of being uninsured, infants and toddlers are less likely to be without health insurance coverage compared to older children (Figure 11). Public insurance reaches the largest share of economically disadvantaged infants and toddlers, covering about three-fourths (75 percent) of these children in low-income families and 87 percent of these children in poor families (Figure 12).

6 percent of infants and toddlers living in low-income families—0.3 million—are uninsured.

23 percent of infants and toddlers living in low-income families—1.2 million—are covered by private insurance.

75 percent of infants and toddlers living in low-income families—4.0 million—are covered by public insurance.
Endnotes

This fact sheet is part of the National Center for Children in Poverty’s demographic fact sheet series and is updated annually. Unless otherwise noted, analysis of the 2014 American Community Survey (ACS) was conducted by Yang Jiang and Mercedes Ekono of NCCP. Estimates include children living in households with at least one parent and most children living apart from both parents (for example, children being raised by grandparents). Children living independently, living with a spouse, or in group quarters are excluded from these data. Children age 14 years and under living with only unrelated adults were not included because data on their income status were not available. Among children who do not live with at least one parent, parental characteristics are those of the householder and/or the householder’s spouse. We would like to thank Renée Wilson-Simmons for her advice on this fact sheet and Suma Setty for data checks and proofreading. Special thanks to Diana Gazzia for layout and production.

1. In this fact sheet, poverty is defined as family income less than 100 percent of the federal poverty threshold, as determined by the U.S. Census Bureau; low income is defined as family income less than 200 percent of the poverty threshold.

2. The U.S. Census Bureau issues the poverty thresholds annually. Thresholds vary by family size and composition. See www.census.gov/hhes/www/poverty/data/threshold/ for the complete 2014 poverty thresholds.

5. In the most recent ACS, parents could report children’s race as one or more of the following: “White,” “Black,” “American Indian or Alaska Native,” or “Asian and/or Hawaiian/Pacific Islander.” In a separate question, parents could report whether their children were of Hispanic origin. For the data reported, children whose parent reported their race as White, Black, American Indian or Alaska Native, or Asian and/or Hawaiian/Pacific Islander and their ethnicity as non-Hispanic are assigned their respective race. Children who were reported to be of more than one race were assigned as Other. Children whose parent identified them as Hispanic were categorized as Hispanic, regardless of their reported race.

6. The variable “native-born parents” is defined to mean that both parents in the family were born in the U.S. or its territories, or born abroad to American parent(s). The variable “immigrant parents” is defined to mean that at least one parent in the family is either a U.S. citizen by naturalization or is not a citizen of the U.S.

7. Parents’ education is defined as the education level of the most highly educated parent living in the household. Parents can either have no high school degree, a high school degree but no college, or some college or more.

8. Parents’ employment is defined as the employment level of the parent in the household who maintained the highest level of employment in the previous year. Parents can either have no employment in the previous year, part-year or part-time employment, or full-time, year-round employment. Part-year or part-time employment is defined as either working less than 50 weeks in the previous year or less than 35 hours per week. Full-time, year-round employment is defined as working at least 50 weeks in the previous year and 35 hours or more per week.

10. People can report more than one type of insurance coverage. Children not covered by private or public health insurance at the time of the survey are considered uninsured.

To find comparable information for all children, see Basic Facts about Low-Income Children: Children under 18 Years, 2014; for young children, see Basic Facts about Low-Income Children: Children under 6 Years, 2014; for children in middle childhood, see Basic Facts about Low-Income Children: Children 6 through 11 Years, 2014; for adolescent children, see Basic Facts about Low-Income Children: Children 12 through 17 Years, 2014.
